ECO100 PLUS

A powerful and elegant amplified audio system, designed to significantly reduce electricity consumption after 20 minutes of non-use

In standby the ECO100 PLUS consume less than 0.5 watt/h and as soon as they receive a new audio signal the system automatically reactivates.

The cabinet is a MDF fibre/wood mix to maintain the softness and depth of the typical wood sound.

The sound is powerful and crystal clear, excellent for perfect speech reproduction as in the case of distance learning and remote conferences.
