

MODULAR VOICE PRO LINE

EMPIRE'S UHF MODULAR SYSTEM THAT ALLOWS YOU TO CONFIGURE THE MICROPHONE SYSTEM ACCORDING TO YOUR NEEDS

Depending on the installation, simply choose one or more receivers between the 2-Channel TY.R20 and the 4-Channel TY.R40, the quantity and type of microphones best suited to your needs and connect them in UHF wireless mode in a few simple steps . Initially it is possible to purchase a single microphone from the three models currently available and subsequently add others.

A typical configuration for great halls and meeting rooms is as follows:

- 1 pc 4-Channel TY.R40 receiver
- 2 pcs TY.MD100 Desk Microphones
- 1 pc Ice TY.MI100 microphone
- 1 pc Neck microphone TY.MN100

Two Desk microphones stay on the table, but they are wireless so they are free to be moved, the standing speaker wears the Neck Microphone and the Ice microphone can be used for interventions in the room.

The TY.MD100 Desk Microphones are particularly suitable for setting up Council Rooms where the often antique and valuable furniture cannot be drilled to pass wiring.

The configuration system is very simple, just bring the microphone close to the receiver and, thanks to the infrared system, synchronization occurs automatically: it is proof for anyone who has never had to deal with this type of system.

MODULAR VOICE PRO LINE R40 RECEIVER

4-CHANNEL UHF RACK RECEIVER

The TY.R40 4-channel UHF Rack Receiver ensures reliable and excellent quality reception and transmission.

It has been designed to interface extremely easily with the microphones of the Modular Voice PRO Line.

The configuration system is very simple, just bring the microphone close to the receiver and, thanks to the infrared system, synchronization occurs automatically: it is proof for those who have never had to deal with this type of system.

There are 200 channels available to choose from so as to allow the installation of multiple receivers in the case of large installations.

Volume adjustment is separate for each channel. Each channel is equipped with a balanced XLR output.

A 6.3mm Jack output is also available which mixes the four channels: very useful for a simpler connection, directly to an audio system equipped with a separate microphone input such as the Empire WB-180PRO.

4 Separate Balanced XLR Outputs + 1 Mixed 6.3mm Jack Output
