HEADPHONES WITH MICROPHONE

H-15 MIC

The EMPIRE H-15 headphones are designed to deliver a flawless audio experience in any context: from open-plan environments to working from home, from e-learning to listening to music and online gaming.

Thanks to the soft earcups - the same as the popular EMPIRE H-10 wireless - they guarantee long-lasting comfort even during the longest sessions, while ensuring excellent sound isolation from external noise.

High-resolution 40mm drivers deliver clear, premium sound, ideal for those looking for professional and reliable audio performance.

The adjustable headband microphone is designed for easy positioning and ensures clear, accurate voice capture.

Thanks to a careful study on signal sensitivity, it is able to effectively reduce environmental noise, limiting the interference space and improving the quality of conversations.

The EMPIRE H-15 headphones feature a dedicated USB sound card, which optimally manages both input sound quality and output microphone sensitivity.

The USB-C connection ensures wide compatibility with smartphones, tablets, PCs, laptops and Macs, making them a flexible solution for every professional and personal need.

The EMPIRE H-15 package includes everything you need for versatile, shared use:

USB-C to USB-A adapter, to ensure maximum compatibility with all devices.

3 replacement microphone pop absorbers, ideal for maintaining audio quality over time.

2 pairs of hygienic earcup covers, perfect when headphones are used by multiple people, such as in shared environments or workstations.

Accessories included for maximum convenience
